Wednesday, December 21, 2011

Reston, Va.—Gretchen Heberling, a civil engineering college student at the University of Wyoming, was recently named a New Face of Civil Engineering by the American Society of Civil Engineers (ASCE) through its first annual New Faces of Civil Engineering – College Edition program. Heberling is one of only 10 students nationwide who are being recognized for achieving the highest standards as college civil engineering students, whose academic success and extracurricular engagement point to a bright future as professionals in the field of civil engineering.

"These students are an inspiration to future generations of students seeking a career in which they can make a difference," said ASCE President Andrew Herrmann, P.E.

A fourth year civil engineering student from Greensboro, Md., Heberling is focused on small business development, and green building design and sustainability. Alongside civil engineering, Gretchen developed quite a following playing her violin for tips in Washington, D.C., subway stations, eventually forming her own violin business. She plans to one day create beautiful buildings that make the most of our scarce natural resources.

Heberling was one of ASCE's top three New Faces of Civil Engineering – College Edition, which were also submitted to the New Faces of Engineering – College Edition program run by the National Engineers Week Foundation (NEWF). This program includes representatives from the civil, mechanical, electrical, chemical, industrial and manufacturing engineering professions. The top civil engineer, chosen by NEWF, is featured on its [Facebook page](#) and will also receive a \$500 ASCE scholarship.
